PROFESSIONAL SUMMARY

Software Engineer with **2+ years of experience at Oracle**, building enterprise-scale applications and AI-powered automation used by global organisations. Experienced in delivering end-to-end features across the full stack, proposing and driving system improvements, and collaborating across multidisciplinary teams. Strong expertise in **Java, Spring Boot, REST APIs, Python, JavaScript, SQL, and AI Automation**. Currently **based in the Netherlands; no visa sponsorship required**.

WORK EXPERIENCE

Applications Developer | Oracle

August 2023 – April 2026

- Transaction Admin Console:**
 - Drove the **migration from a tightly coupled Java application architecture** to a **REST API-driven architecture**, decoupling frontend and backend development across a platform used by 9000+ organisations worldwide for managing and monitoring the transaction life cycle. Covered unit tests for the same.
 - Architected and shipped **end-to-end AI Agents** for transaction workflow automation, replacing multi-step time-exhaustive manual processes; built a Python-based PoC; solution **ranked in the Top 12** of Oracle's **AI Agentworld hackathon**.
 - Delivered **full-stack RBAC features**, expanding the product's access model to empower business users with self-service capabilities and eliminating the need for full admin privileges.
 - Improved SQL performance by 30%** across core transaction processing and filtering workflows **through query restructuring and targeted indexing**, reducing page load times for end users.
Stack: Java, REST APIs, SQL, Oracle Database, Python, Agentic AI, JavaScript, RBAC, Enterprise Security
- AI-powered Transaction Analytics:**
 - Built an **LLM-driven natural-language-to-SQL analytics platform end-to-end**, enabling business users to generate custom reports and query complex datasets through conversational natural language and replacing traditional form-driven reporting workflows, and also supports extensive drill -down exploration.
 - Designed **schema-aware prompt engineering**, fixed-output aliasing, **timezone-aware context injection**, and **SQL validation guardrails** to ensure reliable, secure, and **region-aware query generation**.
Stack: Java, JavaScript, Prompt Engineering, LLM Integration, SQL
- Collaboration & Leadership:**
 - Partnered with QA teams and fellow developers to triage, troubleshoot, and **resolve 200+ issues** across multiple release cycles, contributing to higher product quality and fewer production incidents.
 - Mentored **10+ new hires and interns** on Java development, debugging practices, code quality, and internal frameworks, accelerating onboarding and improving team productivity. Also handled their work distribution, planning, and task deliverables.
 - Volunteered in Oracle-organised initiatives**, supporting community and team engagement activities.

SKILLS

Languages: Java, JavaScript, Python, SQL

Backend: Spring Boot, Node.js, REST APIs, GraphQL, WebSockets, JWT Authentication

Frontend: React, Next.js, Tailwind CSS, HTML5, CSS3

Cloud and DevOps: AWS, Docker, BullMQ(messaging), ELK stack, Grafana, OpenTelemetry, Microservices Architecture, Terraform, CI/CD

Distributed Systems: Kafka, Event-Driven Architecture, gRPC

Applied AI and Automation: Prompt Engineering, LLM Integrations, Agentic Workflows(Langchain & Langgraph), RAG Pipelines

Databases: PostgreSQL, Oracle Database, MongoDB (No-SQL)

Engineering Practices: SOLID Principles, Unit &Integration Testing, Data Structures & Algorithms, Design Patterns, OOP, Agile/Scrum, Git

PROJECTS

Patient Management System - Distributed Healthcare & Analytics Platform | [Link](#)

- Built a distributed healthcare platform reducing manual administrative effort with scalable microservices architecture, automating patient registration, appointment scheduling with real-time conflict detection, billing lifecycle management, and RBAC, backed by isolated databases, event streaming, observability, and fully dockerised deployment for independent scaling and fault isolation.

Stack: Java 21, Spring Boot 3 (Maven), Kafka, Protobuf (gRPC), PostgreSQL, Docker Compose, Spring Cloud Gateway, Spring Data JPA, ELK Stack.

FinSight – AI-Driven Personal Finance Platform | [Link](#)

- Built an AI-driven personal finance platform that automated bank statement parsing and delivered spending insights, pattern visualizations, and personalized recommendations to improve financial visibility and decision-making. Enhanced user engagement through a what-if financial simulator, gamified quizzes, and news impact analysis, transforming the platform from a basic expense tracker into an interactive financial planning tool.

Stack: React.js, Node.js, MongoDB, Google Gemini API, Tesseract.js, JWT, Bootstrap

CERTIFICATIONS

- Architecting Solutions on AWS** - Amazon Web Services via Coursera (2026) | [Link](#)
- Terraform (Infrastructure as Code)** - Packt via Coursera (2026) | [Link](#)
- Building AI Agents and Agentic Workflows** - IBM via Coursera (2026) | [Link](#)

EDUCATION

M.Tech. in Signal Processing and Communication - Jawaharlal Nehru Technological University | GPA: 9.13/10

B.Tech. in Electronics and Communication Engineering - Jawaharlal Nehru Technological University | GPA: 8.83/10
